Manual QA Test Report

Application: SauceDemo (https://www.saucedemo.com/)

1. Test Information

Tester	Kunal Appa
Test date	23 October 2026
Browser	Microsoft edge
Operating system	Windows 11
Accounts / user types tested	problem_user, standard_user , locked_out_user

2. Test Scope and Summary

Test Scope: Tested the SauceDemo application using `standard_user`, `problem_user`, and `locked_out_user`. Checked the confirmation page and Back Home button, including mouse interaction and keyboard focus.

Test Summary: The Back Home button worked with the mouse. Keyboard focus was not visible during testing, and keyboard activation was not reached. The observations are documented for further verification. The `locked_out_user` account was also included in the test scope.

3. Test Case Results

Test ID	Test Scenario	Steps / Data	Expected Result	Actual Result	Status
TC-001	Login page keyboard accessibility	Navigate through the username field, password field, and Login button using the keyboard. Attempt to activate Login with Enter.	Login controls should be keyboard accessible, show visible focus, and support keyboard activation.	Visible focus was not observed. Enter-key activation did not work during the attempted check; keyboard focus was not conclusively established.	Suspected — needs verification
TC-002	Navigation menu keyboard accessibility	Log in as `standard_user`. Navigate to the menu button using the keyboard and attempt to activate it with Enter.	The menu button should show visible focus and open when activated using the keyboard.	Visible focus was not observed, and Enter activation did not work during the test.	Suspected — needs verification
TC-003	Product sorting keyboard accessibility	Log in as `standard_user`. Navigate to the sorting dropdown and attempt to change the sorting option using the keyboard.	The dropdown should show visible focus and allow keyboard selection.	Visible focus was not observed, and the sorting option could not be changed during the keyboard test.	Suspected — needs verification

TC-004	Product images and details	Log in as `problem_user`. Inspect product names, images, and displayed details.	Each product should display the correct image and matching product information.	A mismatch was reported, but the affected product and exact mismatch were not recorded.	Suspected — needs verification
TC-005	Product sorting functionality	Log in using the account from the original test. Select a different sorting option and inspect the product order.	Products should be reordered according to the selected sorting option.	Sorting was reported as not changing the product order; the selected option and resulting order were not recorded.	Suspected — needs verification
TC-006	Checkout Last Name field	Log in using an account that permits checkout. Add a product, proceed to checkout, and enter a last name.	The Last Name field should accept valid text input.	The field was reported as refusing typing, but the exact input method and repeat-test result were not recorded.	Suspected — needs verification
TC-007	Back Home button keyboard accessibility	Complete checkout. Check the Back Home button using the mouse and keyboard.	The button should return to the products page when activated and show visible keyboard focus.	The button worked with the mouse. Keyboard focus was not visible, and keyboard activation was not reached.	Suspected — needs verification

4. Potential Defect Report

1.Defect title

Login page controls do not show visible keyboard focus during testing

Environment

- Application: SauceDemo
- Browser: Microsoft Edge
- Operating system: Windows
- Account type: Login page, before authentication

Preconditions

The SauceDemo login page is open.

Steps to reproduce

1. Open SauceDemo.
2. Use the keyboard to navigate through the login form.
3. Observe the username field, password field, and Login button.
4. Attempt to activate the Login button using Enter.

Expected result

Interactive controls should be reachable through keyboard navigation, display visible focus, and support keyboard activation.

Actual result

Visible focus was not observed on the login controls. Enter-key activation did not work during the attempted check. Keyboard focus was not conclusively established.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Verify keyboard navigation before assigning final ratings.

Reproducibility

Not confirmed through repeated testing.

Evidence

Attach a screenshot or recording of the keyboard navigation test, if available.

Status

Suspected — needs verification.

2. Defect title

Navigation menu button has no visible keyboard focus and does not respond to Enter during testing

Environment

- Application: SauceDemo
- Browser: Microsoft Edge
- Operating system: Windows
- Account type: `standard_user`

Preconditions

The user is logged in and the products page is displayed.

Steps to reproduce

1. Log in using `standard_user`.
2. Locate the navigation menu button.

3. Navigate to the button using the keyboard.
4. Observe whether a visible focus indicator appears.
5. Attempt to activate the button using Enter.

Expected result

The menu button should be keyboard accessible, display visible focus, and open the menu when activated.

Actual result

Visible keyboard focus was not observed, and Enter activation did not work during the test.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Further testing is required to establish the impact.

Reproducibility

Not confirmed through repeated testing.

Evidence

Attach a screenshot or recording of the menu button keyboard test, if available.

Status

Suspected — needs verification.

3.Defect title

Product sorting dropdown has no visible keyboard focus and cannot be changed during the keyboard test

Environment

- Application: SauceDemo
- Browser: Microsoft Edge
- Operating system: Windows
- Account type: `standard_user`

Preconditions

The user is logged in and the products page is displayed.

Steps to reproduce

1. Log in using `standard_user`.
2. Locate the product sorting dropdown.
3. Navigate to the dropdown using the keyboard.
4. Observe whether a visible focus indicator appears.
5. Attempt to change the sorting option using the keyboard.

Expected result

The dropdown should be keyboard accessible, show visible focus, and allow the user to select a sorting option.

Actual result

Visible keyboard focus was not observed, and the sorting option could not be changed during the keyboard test. It was not established whether the issue was caused by keyboard accessibility or the missing focus indicator.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Verify the behavior before assigning final ratings.

Reproducibility

Not confirmed through repeated testing.

Evidence

Attach a screenshot or recording of the sorting dropdown keyboard test, if available.

Status

Suspected — needs verification.

4.Defect title

Product images or details appear inconsistent when using problem_user

Environment

- Application: SauceDemo
- Browser: Microsoft Edge
- Operating system: Windows
- Account type: `problem_user`

Preconditions

The user has successfully logged in using `problem_user` and the products page is displayed.

Steps to reproduce

1. Open SauceDemo.
2. Log in using `problem_user`.
3. Inspect the product names, images, and displayed details.
4. Compare the product images and details with the expected product information.

Expected result

Each product should display the correct image and matching product information.

Actual result

A mismatch involving product images or details was reported during previous testing. The exact affected product and mismatch need to be documented from the original observation.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Rate the issue after confirming the affected product and impact.

Reproducibility

Not confirmed through repeated testing.

Evidence

Attach a screenshot showing the affected product image and details.

Status

Suspected — needs verification.

5.Defect title

Product sorting does not appear to change the product order

Environment

- Application: SauceDemo
- Browser: Microsoft Edge
- Operating system: Windows

- Account type: `problem_user`
- Preconditions

The user is logged in and the products page is displayed.

Steps to reproduce

1. Log in using the account used during the original test.
2. Open the product sorting dropdown.
3. Select a different sorting option.
4. Observe the product order.
5. Compare the displayed order with the selected sorting option.

Expected result

The products should be reordered according to the selected sorting option.

Actual result

Sorting was reported as not changing the product order during previous testing. The exact sorting option and product order observed were not recorded here.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Confirm the selected option and resulting order before assigning ratings.

Reproducibility

Not confirmed through repeated testing.

Evidence

Attach before-and-after screenshots showing the selected sorting option and product order.

Status

Suspected — needs verification.

6.Defect title

Checkout Last Name field does not accept typing during testing

Environment

- Application: SauceDemo

- Browser: Microsoft Edge
- Operating system: Windows
- Account type: problem_user

Preconditions

The user is logged in and has proceeded to the checkout information page.

Steps to reproduce

1. Log in using an account that permits checkout.
2. Add a product to the cart.
3. Proceed to checkout.
4. Click the Last Name field.
5. Attempt to enter a last name.
6. Observe whether the field accepts the input.

Expected result

The Last Name field should accept valid text input.

Actual result

The Last Name field was reported as refusing typing during previous testing. The exact input method and whether the issue persisted after retrying need confirmation.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Confirm whether the field consistently rejects input and prevents checkout.

Reproducibility

Not confirmed through repeated testing.

Evidence

Attach a screenshot or recording showing the Last Name field and the attempted input.

Status

Suspected — needs verification.

7.Defect title

Back Home button has no visible keyboard focus indicator on the confirmation page

Environment

- Application: SauceDemo
- Browser: Microsoft Edge
- Operating system: Windows (version to be added)
- Account type: problem_user

Preconditions

The user has completed checkout and reached the order confirmation page.

Steps to reproduce

1. Log in using an account that permits checkout.
2. Add a product to the cart.
3. Complete the checkout process.
4. On the confirmation page, click Back Home using the mouse and observe the result.
5. Repeat the check using keyboard navigation.
6. Observe whether the button receives visible keyboard focus.

Expected result

The Back Home button should return the user to the products page when activated and should display visible focus when reached using keyboard navigation.

Actual result

The button worked with the mouse. Keyboard focus was not visible during testing, and keyboard activation was not reached.

Severity / priority

Severity: Undetermined. Priority: Undetermined. Further verification is required.

Reproducibility

Not confirmed through repeated keyboard testing.

Evidence

Attach the confirmation-page screenshot and any actual keyboard-test recording, if available.

Status

Suspected — needs verification.

5. Conclusion

SauceDemo was tested using `standard_user`, `problem_user`, and `locked_out_user` to evaluate login behavior, application functionality, and user interface interactions. During testing, the Back Home button worked with the mouse, but a visible keyboard focus indicator was not observed. Keyboard activation could not be verified. Other suspected issues require further testing to confirm their reproducibility and impact. Screenshots and observations should be documented as evidence. Further testing is recommended to verify suspected defects and confirm the overall application behavior.

6. Final Review

Final Review

- All planned test cases have been executed or marked as not tested.
- Test results accurately reflect the actual observations.
- Suspected defects are clearly distinguished from confirmed defects.
- Each defect has a unique ID and a clear title.
- Browser version, operating system, and account type are documented.
- Steps to reproduce each defect are included.
- Expected and actual results are recorded.
- Severity and priority follow the assignment's definitions.
- Screenshots or recordings are attached where available.
- The conclusion summarizes the findings and identifies any remaining verification work.
- Grammar, formatting, and spelling have been checked.

Review status: Pending final verification of suspected defects, environment details, and supporting evidence.
