SauceDemo — Test Plan Document

Project: Swag Labs E-commerce Website
Application URL: https://www.saucedemo.com
Prepared by: Kunal Appa
Role: QA Tester
Document type: Manual Testing Plan
Date: 23 October 2026

---

1. Objective

The objective of this test plan is to evaluate the functionality, usability, and reliability of the SauceDemo e-commerce application through manual testing. Testing focuses on identifying defects, verifying expected behavior, and documenting reproducible issues with supporting evidence.

2. Scope

In scope

- User login and authentication error handling
- Product catalog and product details
- Product sorting
- Adding and removing products from the cart
- Cart contents and item quantities
- Checkout form validation
- Checkout workflow and order confirmation
- Navigation and logout
- User interface and keyboard accessibility observations
- Basic performance observations for slow-loading pages

Out of scope

- Payment gateway integration with real financial transactions
- Security penetration testing
- Backend source-code testing
- Load and stress testing
- Automated testing scripts

3. Types of Testing

Testing type	Purpose
Functional testing	Verify that application features behave as expected.
UI testing	Inspect page layout, images, labels, buttons, and visual consistency.
Negative testing	Check invalid credentials, missing form fields, and other invalid inputs.
Edge-case testing	Examine empty-cart behavior, repeated actions, and navigation boundaries.
Compatibility testing	Consider differences across browsers and screen sizes.
Exploratory testing	Investigate unexpected behavior beyond predefined test steps.
Accessibility checks	Observe keyboard navigation, focus indicators, and keyboard interaction.

4. Test Environment

Application: SauceDemo
URL: https://www.saucedemo.com
Testing approach: Manual testing

Complete the environment details from the system you actually used:

- Operating system and version: [Enter actual version]
- Browser and version: [Enter actual browser and version]
- Device: [Desktop or laptop used]
- Screen resolution: [Enter if recorded]
- Network: [Record if relevant]

Only list browsers and devices that were actually tested. Other browsers can be identified as recommended future compatibility checks.

5. Test Data

The application provides the following test accounts:

Username	Purpose
`standard_user`	Normal application behavior
`locked_out_user`	Login restriction and error-message handling
`problem_user`	Investigate unusual product and interface behavior
`performance_glitch_user`	Observe loading delays and responsiveness

Password: `secret_sauce`

Use these accounts only for the application's intended testing purposes. Record the account used for each test in your results.

6. Test Cases

The assignment requires at least five detailed test cases. Complete this section using the test cases you independently wrote and executed.

For each test case, record:

- Test ID
- Scenario
- Preconditions
- Steps and input data
- Expected result
- Actual result
- Status: Pass, Fail, Blocked, or Not Tested
- Evidence reference, where available

Include cases covering login, product browsing or sorting, cart operations, checkout validation, and order completion. Ensure that each case contains the exact steps you performed and the actual result you observed.

7. Risk Assessment

Risk area	Potential impact	Testing priority

Authentication	Users may be unable to access the application or may receive incorrect error messages.	High
Product catalog	Incorrect images, descriptions, prices, or sorting can mislead customers.	High
Shopping cart	Incorrect cart contents or item removal can affect purchases.	High
Checkout validation	Missing or invalid information may prevent a valid checkout or permit incorrect progression.	High
Order completion	Incorrect confirmation or navigation can confuse customers about purchase status.	High
UI and accessibility	Poor focus visibility or broken controls may prevent some users from completing tasks.	Medium
Performance	Delayed loading may reduce usability and disrupt workflows.	Medium

These priorities are initial risk-based assessments and should be adjusted to reflect the actual impact of any verified defects.

8. Entry Criteria

- The application is accessible.
- Test accounts and credentials are available.
- The browser and testing environment are ready.
- The tester understands the planned test scenarios.

9. Exit Criteria

- All planned test cases have an execution status.
- Actual results are recorded accurately.
- Identified defects are documented with reproducible steps.
- Available evidence is attached or referenced.
- Unresolved issues and testing limitations are recorded.

10. Deliverables

- Test Plan Document
- Executed Test Case Results
- Bug Report
- Supporting screenshots or recordings
- Final testing summary

11. Limitations

Testing is limited to the browsers, devices, accounts, and workflows actually exercised. Findings from one environment may not represent behavior in all environments. Suspected defects require further verification before being reported as confirmed.

12. Approval and Review

Prepared by: Kunal Appa
Review status: Completed
Completion date: 24-10-2026
